2024 杭州热核及其相关问题研讨会

Workshop on Heat Kernel and Related Topics in Hangzhou 2024

会议时间 | Date:

2024. 03. 22—2024. 03. 25

会议地址 | Address:

杭州华北饭店 | Huabei Hotel

会议联系人 | Organizing committee:

曹 军 CAO Jun	cao.jun1860@zjut.edu.cn ,	15168256040
刘丽光 LIU Liguang	liuliguang@ruc.edu.cn ,	13811282314
金永阳 JIN Yongyang	yongyang@zjut.edu.cn ,	15958151735
沈守枫 SHEN Shoufeng	mathssf@zjut.edu.cn ,	13819180808
吴玉荣 WU Yurong	wuyurong2003@163.com ,	13291878770

会议资助 | Funded by:

国家自然科学基金 | National Natural Science Foundation of China

浙江省自然科学基金 | Zhejiang Provincial Natural Science Foundation of China

浙江工业大学数学学科建设经费 | Zhejiang University of Technology Mathematics

Discipline Construction Fund.

会议日程安排 | Conference Agenda

3.23 (星期六) (报告地点:华北饭店一楼会议中心)

上午 (08:00-11:45)	
08:00--08:15 开幕式	
Host 主持人: JIN Yongyang 金永阳 (Zhejiang University of Technology)	
08:30--09:15	GRIGOR'YAN Alexander 格里戈里安·亚历山大 (Bielefeld University)
	Tail estimates of heat kernels for jump processes
Host 主持人: WU Huongxiong (伍火熊) (Xiamen University)	
09:20--10:05	JIANG Renjin 蒋仁进 (Capital Normal University)
	Application of heat kernel estimates to Riesz transform on general manifolds
10:05—10:25 Photo & Tea break 照相与茶歇	
Host 主持人: CHEN Peng (陈鹏) (Sun Yat-Sen University)	
10:05--10:35	SUN Yuhua 孙玉华
	Sharp criteria for nonlocal elliptic inequalities on manifolds
主持人: 李中凯 (上海师范大学)	
10:40--11:10	谌稳固 (北京应用物理与计算数学研究所)
	Stable image reconstruction by TV type methods
主持人: 何建勋 (广州大学)	
11:15--11:45	李俊峰 (大连理工大学)
	Schrödinger 算子的时空估计
午餐 (华北饭店东三楼望湖厅凭餐券自助)	
下午 (14:00-17:50)	
主持人: 丁勇 (北京师范大学)	
14:00--14:30	洪桂祥 (哈尔滨工业大学)
	Sharp endpoint L_p estimates of quantum Schrödinger groups
主持人: 刘宗光 (中国矿业大学)	
14:35--15:05	赵发友 (上海大学)
	Sharp constants for multilinear Hausdorff operators on local Morrey-type spaces
主持人: 朱月萍 (南通师范高等专科学校)	
15:10--15:40	李澎湃 (青岛大学)
	Characterizations of logarithmic Q type spaces and applications
15:40—15:50 茶歇	
主持人: 王茂发 (武汉大学)	
15:50--16:20	陈伟 (扬州大学)
	Characterizations of A_∞ weights in martingale spaces
主持人: 宋亮 (中山大学)	
16:25--16:55	司增艳 (河南理工大学)

	Some estimates for the multilinear Littlewood-Paley operators
主持人：蒋仁进 (天津大学)	
17:00--17:30	张璐 (陕西师范大学)
	Multi-parameter Hormander-type multiplier operators
主持人：曹军 (浙江工业大学)	
17:35--17:50	王鹏程 (springer 出版社)
	Springer 出版社图书出版相关流程及服务介绍
18:05 晚餐 (华北饭店东三楼望湖厅桌餐)	

03.19 (星期日) (报告地点:华北饭店一楼会议中心)

上午 (08:00-10:20)	
主持人：马柏林 (嘉兴学院)	
08:00--08:30	刘博辰 (南方科技大学)
	Mixed-norm of orthogonal projections and analytic interpolation on dimensions of measures
主持人：陶祥兴 (浙江科技学院)	
08:35--09:05	席亚昆 (浙江大学)
	A two term Kuznecov sum formula
09:05—09:15 茶歇	
主持人：贾厚玉 (浙江大学)	
09:15--09:45	赖旭东 (哈尔滨工业大学)
	Fourier restriction estimates on quantum Euclidean spaces
主持人：王梦 (浙江大学)	
09:50--10:20	杨四辈 (兰州大学)
	On BMO and Hardy regularity estimates for a class of non-local elliptic equations
主持人：金永阳 (浙江工业大学)	
10:25--10:55	韩永生 (美国奥本大学)
	T1 theorem for non-standard singular integral with product kernels associated with mixed homogeneities
11:00 午餐 (华北饭店东三楼望湖厅凭餐券自助)	
下午 (14:00-17:30)	
自由讨论或离会	

报告题目与摘要

Titles and abstracts of talks

Day 1 (3.23)

Tail estimates of heat kernels for jump processes

GRIGOR'YAN Alexander | 格里戈里安·亚历山大 (Bielefeld University)

Abstract: TBA

Application of heat kernel estimates to Riesz transform on general
manifolds

JIANG Renjin | 蒋仁进 (Capital Normal Univeristy)

Abstract: TBA

Sharp criteria for nonlocal elliptic inequalities on manifolds

SUN Yuhua | 孙玉华 (Nankai Univeristy)

Abstract: We investigate the existence and nonexistence to nonlocal differential inequalities on manifolds. This talk is based on joint work with Qingsong Gu, and

Xueping Huang.

Boundary value problems for harmonic functions on domains in p.c.f. self-similar sets

GU qingsong | 顾庆松 (Nanjing University)

Abstract: We study the boundary value problems for harmonic functions on open connected subsets of post-critically finite (p.c.f.) self-similar sets, on which the Laplacian is defined through a self-similar local regular Dirichlet form. For a p.c.f. self-similar set K , we prove that for any open connected subset Ω of K whose “geometric” boundary is a graph-directed self-similar set, there exists a finite number of matrices called flux transfer matrices whose products generate the hitting probability from a point in Ω to the “resistance” boundary $\partial\Omega$. The harmonic functions on Ω can be expressed by integrating functions on $\partial\Omega$ against the probability measures. Furthermore, we obtain a two-sided estimate of the energy of a harmonic function in terms of its values on $\partial\Omega$. This generalizes the known results on Sierpinski gasket to p.c.f. self-similar sets.

The talk is based on a joint work with Hua Qiu.

Strong elliptic Harnack inequality and condition UJS

HU Jiaxin | 胡家信 (Tsinghua University)

Abstract: We study the strong elliptic Harnack inequality for a regular resurrected Dirichlet form on a metric space. Condition (UJS) plays a role, and we give an equivalent condition for (UJS). Joint with Zhenyu Yu.

Dirichlet forms and Laplacians on fractals

QIU Hua | 邱华 (Nanjing University)

Abstract: The analysis on fractals mainly investigates the theory of Laplacians on fractals, closely related to which are the Brownian motion (from a probabilistic perspective) and Dirichlet form (from an analytical perspective) theories on fractals. In this talk, I will

introduce our recent progress on the existence and uniqueness problem of Laplacians on two types of fractals. This is based on some joint works with Shiping Cao.

On gradient blowup profiles for nonlinear heat equations

HUANG Yi | 黄益 (Nanjing Normal Univeristy)

Abstract: In a recent work, Duong, Ghouh and Zaag determined the gradient profile for blowup solutions of standard semilinear heat equation with power nonlinearities in the (supposed to be) generic case. Their method refines the constructive techniques introduced by Bricmont and Kupiainen and further developed by Merle and Zaag. In this paper, we extend their refinement to the problem about the reconnection of vortex lines with the boundary in a type-II superconductor under planar approximation, a physical model derived by Chapman, Hunton and Ockendon featuring the finite time quenching for the nonlinear heat equation

$$\frac{\partial h}{\partial t} = \frac{\partial^2 h}{\partial x^2} + e^{-h} - \frac{1}{h^\beta}, \quad \beta > 0$$

subject to initial boundary value conditions

$$h(\cdot, 0) = h_0 > 0, \quad h(1, t) = 1.$$

We derive the intermediate extinction profile with refined asymptotics, and with extinction time T and extinction point 0, the gradient profile behaves as $x \rightarrow 0$ like

$$\lim_{t \rightarrow T} \left(\nabla h(x, t) \right) \sim \frac{1}{\sqrt{2\beta}} \frac{x}{|x|} \frac{1}{\sqrt{|\log |x||}} \left[\frac{(\beta + 1)^2}{8\beta} \frac{|x|^2}{|\log |x||} \right]^{\frac{1}{\beta + 1} - \frac{1}{2}},$$

agreeing with the gradient of the extinction profile previously derived by Merle and Zaag. Our result holds with general boundary conditions and in higher dimensions.

On odd-normal numbers

ZHANG Junqiang | 张俊强 (China University of Mining and Technology-Beijing)

Abstract: A real number x is considered normal in an integer base $b \geq 2$ if its digit expansion in this base is "equitable", ensuring that for each $k \geq 1$, every ordered sequence of k digits from $\{0, 1, \dots, b-1\}$ occurs in the digit expansion of x with the same limiting frequency. Borel's classical result [B09] asserts that Lebesgue-almost every $x \in \mathbb{R}$ is normal in every base $b \geq 2$.

Mandelbrot Cascades: critical moments, Rajchman measures and Sobolov smoothness

QIU Yanqi | 邱彦奇 (Hangzhou Institute for Advanced Study)

Abstract: We introduce a method for estimating weighted sum of random variables on trees. This method on the one hand will allow us to deal with the asymptotic order of moments of Mandelbrot Cascades at critical exponents, and on the other hand will allow us to establish Rajchman property of the random measure arising from the Mandelbrot Cascades, as well as the Sobolev smoothness of the self-convolution of the random measure. The talk is based on joint work with Xinxin Chen, Yong Han and Zipeng Wang.

Day 2 (3.24)

Heat kernel and Green function on subgraphs of a complete graph

LIN Yong | 林勇 (Tsinghua University)

Abstract: We derive expression for the subgraph heat kernel and compute the coefficients of the expansion. By using the heat kernel expansions for the Laplacian on a subgraph of a complete graph, we obtain formal expansions for the Green function of the Laplacian. These are based on the joint works with Ngai and Yau.

Lower estimates and Hölder regularity of the heat kernels for non-local Dirichlet form on doubling spaces

HU Eryan | 胡二彦 (Tianjing University)

Abstract: TBA

Weyl law, Kuznecov sum, and inverse spectral problems XI Yakun | 席亚昆 (Zhejiang University)

Abstract: The study of (pointwise) Weyl asymptotics is one of the central problems in spectral geometry and harmonic analysis on Riemannian manifolds. The Kuznecov formula is a generalized version of the pointwise Weyl formula. We survey our recent works on pointwise Weyl law, (generalized) Kuznecov sum formula, and related inverse problems.

Heat kernel-based p -energy norms on metric measure space GAO Jin | 高晋 (Hangzhou Normal University)

Abstract: We focus on heat kernel-based p -energy norms ($1 < p < \infty$) on bounded and unbounded metric measure spaces, in particular, on nested fractals and their blowups. Under weak-monotonicity properties for different types of energies, we generalise the celebrated Bourgain-Brezis-Mironescu (BBM) convergence for $p \neq 2$. When there admits a heat kernel satisfying the two-sided estimates, we establish the equivalence of different p -energy norms and weak-monotonicity properties. Our paper's key result involves verifying various weak-monotonicity properties on nested fractals and their blowups. We achieve this by establishing the equivalence between discrete and integral-type weak-monotonicity. Consequently, many classical results on p -energy norms hold for such fractals, including the BBM convergence and Gagliardo-Nirenberg inequality. It is based on joint work with Zhenyu Yu and Junda Zhang.

浙江工业大学·理学院·应用数学系简介

浙江工业大学理学院应用数学系成立于 2000 年，同年信息与计算科学专业招生，2005 年数学与应用数学专业开始招生，2010 年获数学一级学科硕士点、浙江省重点学科，2013 年成立由汪徐家院士任学术负责人的校数学研究中心，2018 年数据科学与大数据技术专业开始招生（与计算机学院合办），2020 年信息与计算科学专业获国家一流本科专业，2021 年数学与应用数学专业获省一流本科专业，2021 年获数学一级学科博士点。

经过 20 年的建设，应用数学系已拥有 1 个一级学科博士点、1 个一级学科硕士点和 3 个本科专业（数学与应用数学、信息与计算科学、数据科学与大数据技术），形成了完整的本硕博培养体系，已具有基础数学、应用数学、非线性科学三个稳定的主干学科方向，并拥有分析与几何、微分方程与动力系统、数据科学、优化控制、可视化计算、金融数学与应用、大学数学教学等 7 个科学教学研究团队。

学科目前拥有专职教师 70 人，其中教授 12 人，副教授 33 人，讲师 26 人，硕士生导师 28 人，博士生导师 13 人，博士（后）54 人，省杰青 1 人，省千人计划 1 人，省“151”人才 6 人，省中青年学科带头人 4 人，校杰青 1 人，校优青 7 人。数学学科以中、青年教师为主体，45 岁以下中青年教师占比 80%。经过多年的建设与发展已经形成研究方向明确、职称学历和年龄结构合理的师资队伍。

近五年，应用数学系共承担纵向科研项目 70 项，总经费高达 1307.46 万元，其中国家级纵向科研项目 30 余项，经费达 1113.68 万元。学科科研成果丰硕，近五年共发表论文 202 篇，其中不少重要成果发表在《Geom. Funct. Anal.》、《Memoirs of AMS》、《J. Differ. Geom.》、《Adv. Math.》、《Math. Ann.》、《J. Math. Pures Appl.》、《Transactions of AMS》、《ARMA》、《J. Funct. Anal.》、《SIAM J. Appl. Math.》、《SIAM J. Optim.》等国际顶级期刊。相关论文获得华人数学家大会联盟最佳论文奖（若琳奖），教育部自然科学二等奖 1 项，另有 ESI 高被引论文 11 篇。出版专著和教材 18 部。学科在注重理论研究同时，也积极注重学科交叉融合，并已在控制工程、经济数学、计算机视觉等多个交叉领域产生重要成果，获发明专利 11 项，呈现出显著的社会效益。

诚挚欢迎各位专家莅临指导！

诚挚邀请各位优秀博士加盟！
